NAME

ExtUtils::MakeMaker::vmsish - Platform-agnostic vmsish.pm

SYNOPSIS

```
use just like vmsish.pm
```

DESCRIPTION

Until 5.8.0, vmsish.pm is only installed on VMS. This means any code which has 'use vmsish' in it won't even compile outside VMS. This makes ExtUtils::MM_VMS very hard to test.

ExtUtils::MakeMaker::vmsish is just a very thin wrapper around vmsish which works just like it on VMS and everywhere else it does nothing.
