NAME

Math::BigInt::CalcEmu - Emulate low-level math with BigInt code

SYNOPSIS

```
use Math::BigInt::CalcEmu;
```

DESCRIPTION

Contains routines that emulate low-level math functions in BigInt, e.g. optional routines the low-level math package does not provide on it's own.

Will be loaded on demand and called automatically by BigInt.

Stuff here is really low-priority to optimize, since it is far better to implement the operation in the low-level math libary directly, possible even using a call to the native lib.
